

## BugBrand BabyBugCrusher9v Desktop & Stomp versions

BabyBugCrusher = compact sample-rate reducer pedal.

- **Preamp** – provides boost for the input. Clean or overdrive via switch
- **Rate** – sets the sample-rate reduction from low-gnarl to hi-fizzle
- **Tone** – treble boost/cut circuitry
- **Level** – output volume adjustment
- **Bypass** – true bypass footswitch (stomp version) / toggle-switch (desktop version)

9v operation from internal battery (remove base to replace) or standard centre negative 2.1mm DC power jack. Inserting a DC jack disconnects the battery. Power is supplied to the unit when a jack plug is inserted into the In socket. An unbalanced mono jack must be used! Unplug the input jack when not in use.
